

Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau

Project Documentation format

1. Introduction

- Project Title: Heritage Treasures: An In-Depth Analysis of UNESCO World Heritage Sites in Tableau
- Team Members: Y.S YASHASWINI and N.VENKATA BHAVANA

2. Project Overview

- Purpose

The purpose of this project is to develop an interactive data visualization platform that analyzes UNESCO World Heritage Sites using Tableau Public. The project aims to provide meaningful insights into global heritage site distribution based on country, category, and inscription year.

The goal is to simplify complex heritage data into visually understandable dashboards that can be accessed publicly through a web interface.

- Features

Interactive Tableau Dashboard

Country-wise Heritage Site Distribution

Category-based Filtering (Cultural, Natural, Mixed)

Story-based Data Presentation

Public Access via GitHub Pages

Responsive Web Interface

3. Architecture

- Frontend

The frontend is developed using HTML and CSS and deployed through GitHub Pages.

It embeds the Tableau Public dashboard using an iframe component to display interactive visualizations.

Architecture Flow:

User Browser → GitHub Pages Website → Embedded Tableau Dashboard

- Backend

This project does not use a traditional backend like Node.js or Express.js. Data processing and visualization logic are handled directly within Tableau Public.

All data interactions occur within Tableau's visualization engine.

- Database

The dataset is sourced from UNESCO World Heritage data (CSV format). The data is cleaned and structured within Tableau for visualization purposes.

No separate database like MongoDB is used in this project.

4. Setup Instructions

- Prerequisites

Web Browser (Chrome / Edge / Firefox)

Git (optional, for cloning repository)

Internet connection

- Installation

Step 1: Clone the repository

git clone <https://github.com/YASHASWINI-rgb/UNESCO-heritage-project>

Step 2: Navigate to project folder

cd UNESCO-heritage-project

Step 3: Open index.html in browser

Or directly access deployed site:

<https://YASHASWINI-rgb.github.io/UNESCO-heritage-project/>

No environment variables are required.

5. Folder Structure

- Client (Frontend)

UNESCO-heritage-project/

|— index.html

|— style.css

|— assets/

|— README.md

- Server

No backend server is implemented in this project.

Visualization and logic are managed through Tableau Public.

6. Running the Application

- Since this is a static web project:
- Frontend
- Open index.html in browser
OR
- Access deployed version:
- <https://YASHASWINI-rgb.github.io/UNESCO-heritage-project/>
- Backend
- Not applicable (No Node.js backend used)

7. API Documentation

- This project does not expose REST APIs.
- All data interactions are handled internally within Tableau Public dashboards.

8. Authentication

- No authentication system is implemented.
- The dashboard is publicly accessible via Tableau Public and GitHub Pages.
- Access Control:
- Public access without login requirements.

9. User Interface

- The UI consists of:
- Embedded interactive Tableau dashboard
- Filter panels
- Story navigation
- Clean webpage layout

10. Testing

- Testing Strategy:
- Verified dashboard filter functionality
- Cross-checked data counts with original dataset
- Tested responsiveness on multiple browsers
- Tools Used:
- Tableau Public
- Web Browser Testing

11. Screenshots and Demo links:

Live Demo:

Story 1:

12. Known Issues

- Dashboard requires internet connection
- Loading time may vary depending on network speed
- Limited customization options in Tableau Public

13. Future Enhancements

- Add real-time dataset updates
- Implement advanced analytics features

- Include tourism and economic impact data
- Improve UI design with enhanced styling
